ALL OUR COLORED GEMSTONES ARE "E" (ENHANCED) AND/OR (TREATED). In general, some of the enhancement methods used are heating, oiling, filling, with resin agents, etc. Some of the treatment methods used are coating, diffusion, dyeing, joban oil, glass filling, irradiation, lasering, etc, we do not know the methods used prior to our import since each country uses different methods. If required, we may send the stones to a laboratory for more information prior to your purchase.
I have received the above goods in court quantity and in order.
